

City of Springville Waste Water Plant

Phosphorus Reduction

The effluent phosphorus levels at the Springville Waste Water Treatment Plant have been above 3 mg/L for years.

Ergofito Technologies performed a 15-day demonstration and reduced the phosphorus levels by 82% - down to 0.72 mg/L . This falls below the 1.0 mg/L 2020 TBPEL rule, making Springville the first WWTP to be compliant with the new nutrient standards.

The biological treatment required no mechanical or operational changes and was simply added to the headworks daily.

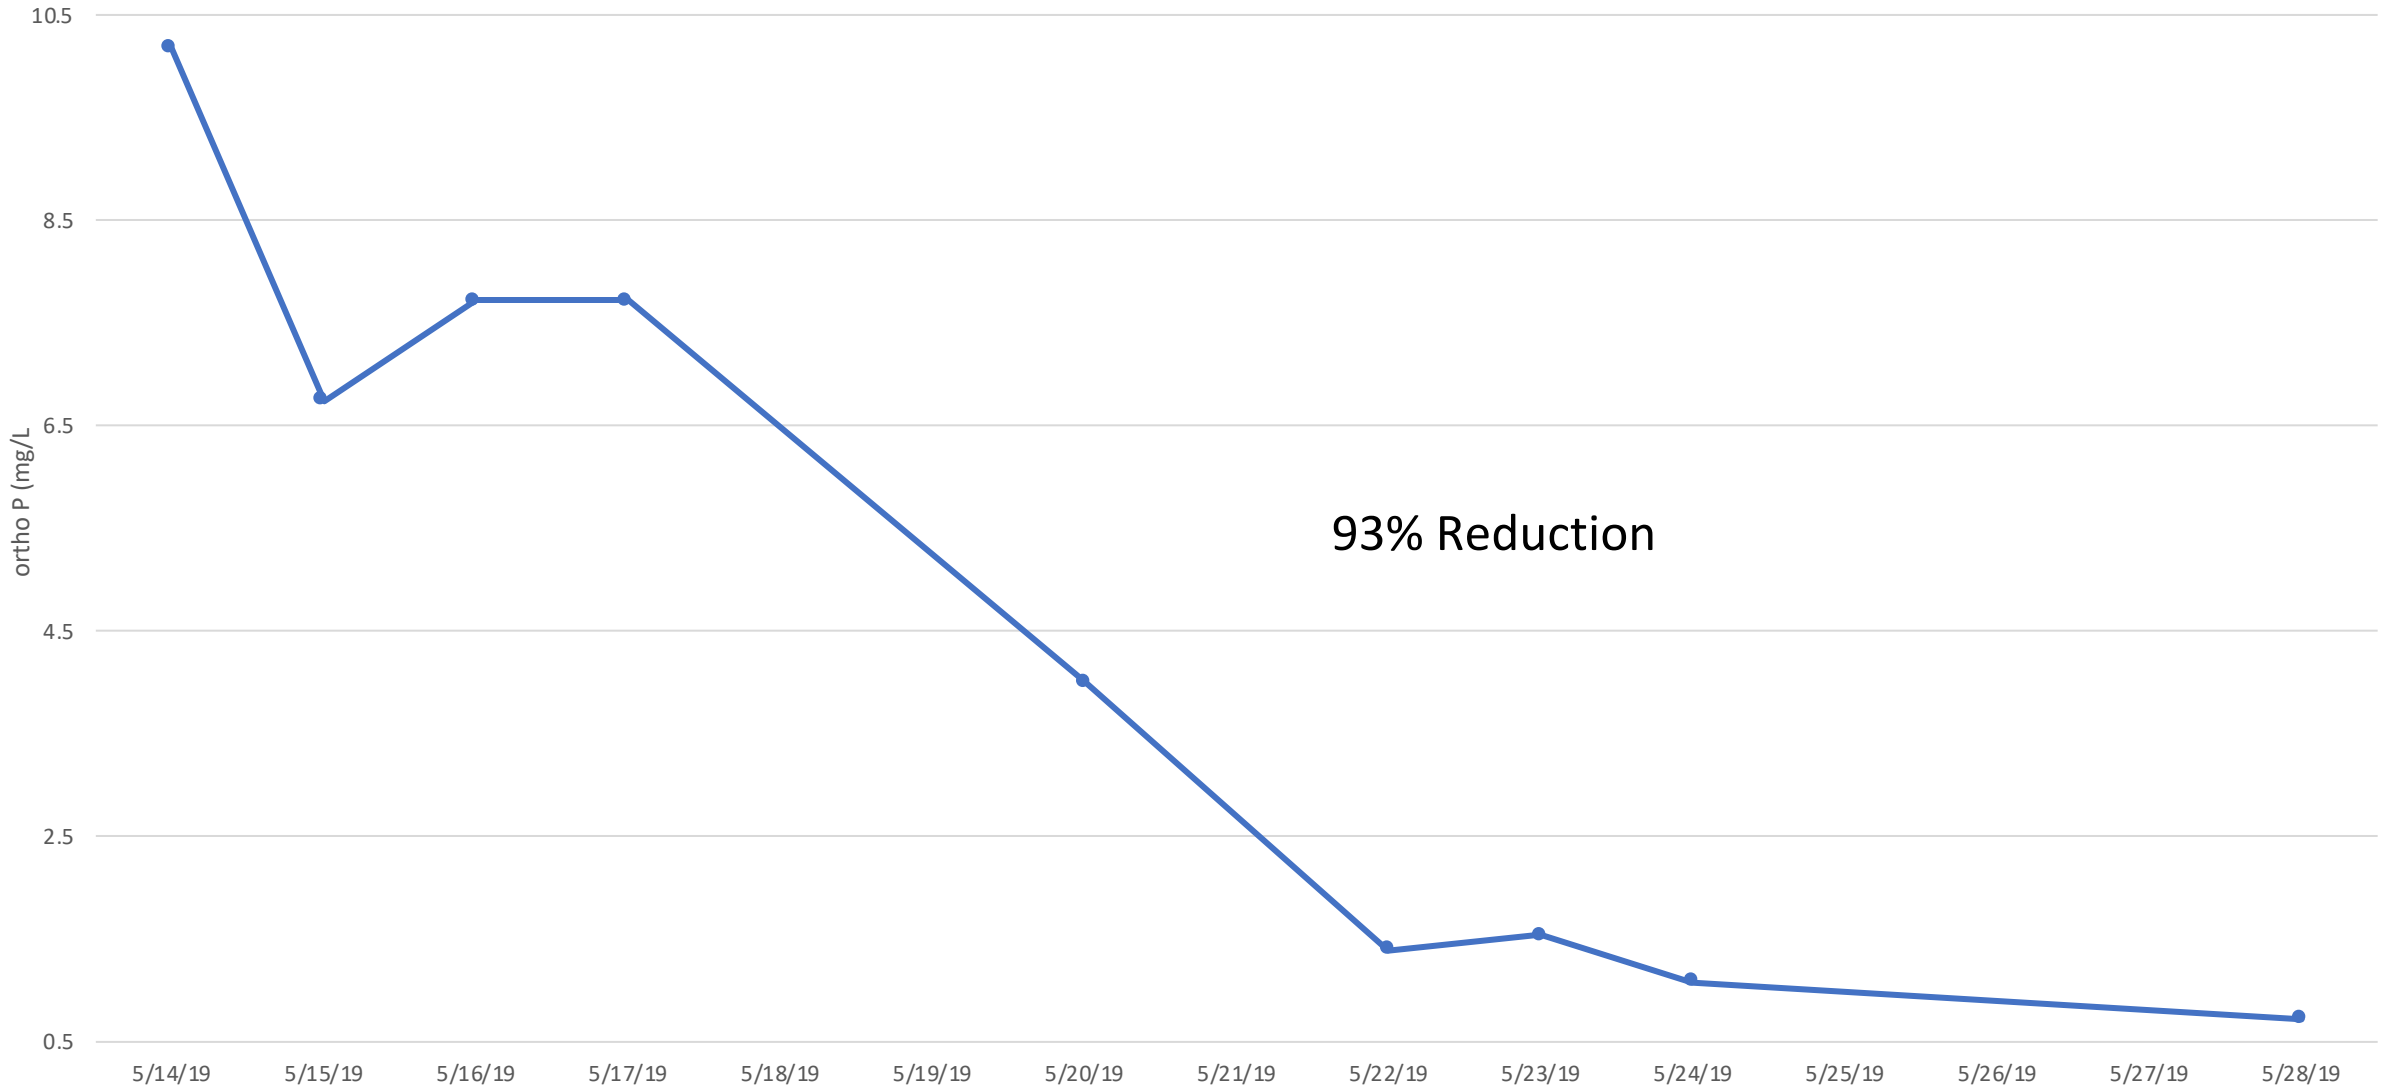

Benefits of Ergofito Technologies

- Phosphorus Reduction
- Nitrogen Reduction (*Eliminates floating sludge problems*)
- Lower Fats, Oils and Greases
- Significant Odor Reduction
- Pathogen Reduction / Elimination
- Sludge (*Class A – Pathogen Free*)
- Eliminates Struvite Problems
- Lower Cost of Operations
